

# Poultry farming project report 500 birds

Price of 1 broiler chick varies between Rs 30 to 35 however; it mostly depends on market condition sometime it may go down to Rs 15 to 20 when market is worst.

- Current price of 1 chick is Rs 32
- Rs 32 x 500 chicks = Rs 16000
- 15 quintal feeder = Rs 48,000
- Medicine cost = Rs 3000
- Miscellaneous cost = Rs 1000

**Total Cost** = 68,000 in 45 to 50 days

## Now let's calculate profit from broiler business

- While purchasing 500 chicks you will get 15 chicks extra
- After 45 days if there is only 485 broiler chicks available
- Weight of 1 broiler bird will be around 1.9 kg to 2.3 or sometime 2.5 kg
- Let's take one bird weight = 2 kg
- 485 broiler x 2 kg = 970 kg
- Now 970 kg x current market price of 1 kg chicken

Note – chicken price changes frequently, we are giving example you can add the current price of at that time and location

If current chicken price is Rs 150 per kg

$$970 \times 150 = \text{Rs } 145500$$

Net profit = Profit – Cost

$$\text{Net profit} = \text{Rs } 145500 - \text{Rs } 68000 = 77500$$

**Net Profit** = Rs 77,500

**Note** - In this calculation shade (chicks residence) cost is not included if new shade is created in own land then it may cost around 14 to 15 lakh in 2021 you can add this figure accordingly.
